

CENTRE FOR BIOFIELD SCIENCES

3rd March 2010

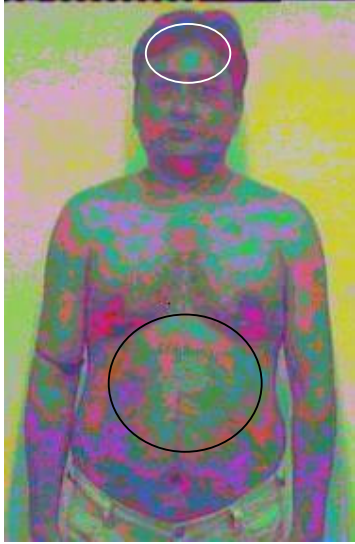

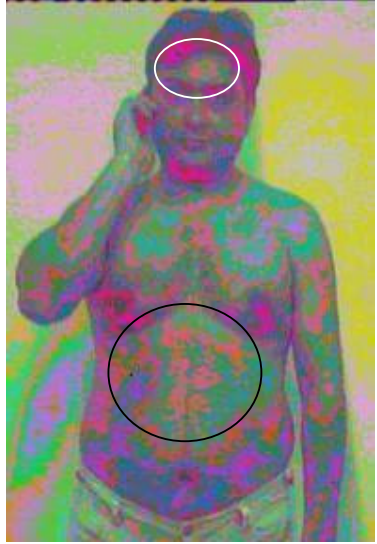

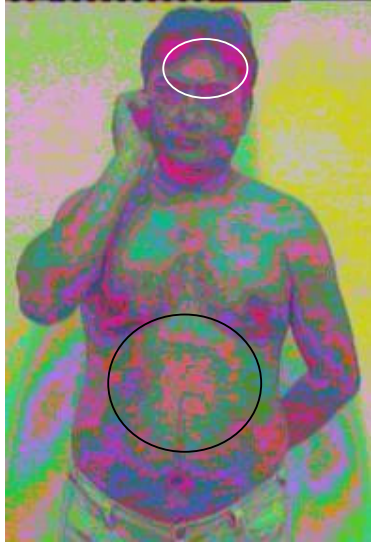

An experimental study was carried out at CBS Pune by Dr. Anuja Ranade and Dr. Suresh V. Dagur with **Portoworld**. Following are the details of the study carried out.

METHODOLOGY:

- The camera was set on a certain focus and then it was kept constant throughout the scan.
- PIP pal was the filter used for subject testing.
- PIP scans were taken on following steps:
 1. Subject was just standing without holding any mobile.
 2. Subject holding mobile on standby without radisafe.
 3. Subject holding mobile during call without radisafe.
 4. Subject holding mobile on standby with radisafe.
 5. Subject holding mobile during call with radisafe

OBSERVATION:

FILTRE 1: PIP pal:

		
Subject was just standing without holding any mobile	Subject holding mobile on standby without radisafe	Subject holding mobile during call without radisafe

	
Subject holding mobile on standby with radisafe.	Subject holding mobile during call with radisafe.

Significant changes were seen in the brow and the solar chakra. The Brow chakra which was very bright, vibrant and dominant of green before holding any mobile

has suddenly become red and pooled with low red energy. This indicates negative effect of mobile on human energy field.

After using **radisafe** there is decrease in red low energy along with appearance of blue over solar chakra. Blue is considered to be a healing frequency . This is a very positive shift seen over chakras and human energy field.

CONCLUSION: Overall there are positive changes that are seen in the before and after scans. Decrease in red low energy is seen after use of **radisafe** which is a positive shift.
